

Coming Soon! the Doceri iPad System from SP Controls

Doceri is a suite of products, including an advanced Apple™ iPad™ application that allows the teacher to whiteboard and control all of the technology in the classroom, all while facing students and moving freely around the room.

Doceri unifies the classroom technology experience into one user interface via the iPad, controlling the many other things that are used in the typical classroom: DVD players, audio systems, projectors, etc.

In conjunction with a projector and classroom computer, the Doceri system allows teachers to control all of the classroom AV equipment (when used with the NRC AmpLINC™), and enables seamless navigation among all the digital resources at hand, whether they're on the classroom computer or DVD, software-based or web-based.
